

Third Party Scalability Analysis Assessment Event (AE) Assessment Criteria

The purpose of this event is to identify companies that can support a USSOCOM pilot program to vet the maturity of solutions providers that have developed SOF prototypes. Companies selected must understand markets and technology that are aligned with SOF interests and properly vet start-ups and young companies to verify they are mature enough to be candidates for production acceleration.

The results from this pilot program will determine the future scope and scale of contracts with a third-party solution provider.

In descending order of importance:

1. Technical merit of third-party accessor to identify SOF aligned commercial market sectors (product-market fit), and their relevance to other Service technology requirements/needs.
2. Technical merit of third-party accessor to identify maturing, scalable, technology companies that would be suitable candidates for SOCOM Private Capital Consortium.
3. Rough Order of Magnitude for cost and schedule based on the general scope discussed subject to negotiation with the government during the selection process.
4. The viability and maturity of the third-party company, including previous experience performing similar services and for whom. (The Government may use external market research to evaluate company strength and viability)
